

Part No. ALL10678

## Bolt Center Caps

Caps slip over the head of standard 1/2" bolts to accurately measure the center to center length of installed suspension tube assemblies. Machined step allows you to easily attach the end of a standard tape measure while reading the length to the center of the opposite cap. Caps feature a built-in o-ring which allows the cap to swivel on the bolt head and keeps it from falling off. Package of 2.
