Braided Steel Lines with 10mm Banjo End

Braided steel lines feature a PTFE inner liner which is compatible with all brake fluids and most other fluids and fuels and has a working temperature range of -400°F to 400°F. The braided steel outer covering adds a protective layer against abrasion and is more durable than standard rubber hose. Length stated is from end to end including fittings. Lines are not DOT approved.

#3 Braided steel lines have a maximum working pressure of 3200psi.

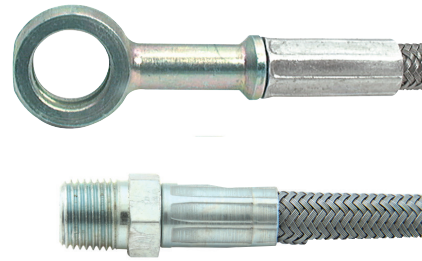

#4 Braided steel lines have a maximum working pressure of 3000psi.
