

5/8" Bent Steel Tubes

Bent steel tubes have many uses when extra clearance is needed over standard straight suspension tubes. Commonly used on rear suspensions or as a RH tie rod adjusting sleeve on modifieds and stock cars when additional clearance is needed to prevent contact with the frame rail. Tubes are constructed of .160" wall 7/8" O.D. DOM mild steel tubing and feature a 25 degree bend with 5/8"-18LH threads on the straight end and 5/8"-18RH threads on the curved end.
