How To Use Solder Slugs:

1. Strip cable so the exposed copper reaches the bottom of the battery terminal.
2. Place the proper size slug in the battery terminal and secure terminal in vice.
3. Heat the base of the battery terminal with the slug inside using a propane torch or similar tool. As the battery terminal is heated, gently press cable into terminal. Allow time for the connection to cool.
4. Protective clothing and eyewear should be worn at all times.
